Business Places with a Power Purchase Agreement to Receive Power Achieve a Renewable Energy Ratio of 100%

Joshin Denki Co., Ltd. (Head Office: Osaka City, Osaka; Representative Director, President and Executive Officer: Ryuhei Kanatani) hereby announces that through its action plan toward 2030, the ratio of electricity from renewable energy has reached 100%*1 in business places having a power purchase agreement to receive power.

The introduction of renewable energy reduces approximately 18,000 tons of greenhouse gas (GHG) emissions a year.

Our group is a retailer mainly selling household appliances, so that most of the GHG emissions are due to electricity use in stores. As such, our group has given top priority to shifting to renewable energy for electricity used in business places and has steadily introduced renewable energy over the past two years.

Our group places "contribution to a prosperous society in harmony with the global environment" as a materiality issue (key issue). The climate-change initiatives (individual strategies) set forth in JT-2025 Management Plan, a new medium-term management plan formulated in 2023, are an action plan aimed at realizing "a company that supports growth of local communities and contributes to the future of people and environment," which is what our group should be in 2030 and are also in line with the roadmap for climate-change initiatives.

Considering the initiatives for reducing GHG emissions in business activities, which are said to have a great impact on global warming, as one of our social responsibilities as a member of society, our group will continue to step up efforts for environmental issues and pursue sustainable management that creates "social values in harmony with the global environment" with all stakeholders.

For our initiatives on climate change problems and other environmental issues, please refer to the Environment section of the Integrated Report 2023
